EDUCATION

Indian Institute of Technology

Bachelors in Data Science and Applications (CGPA: 7.89)

Chennai, Tamil Nadu

Sep 2022 – 2026

Udit Narain Inter College

Intermediate Education (72%)

Padrauna, Uttar Pradesh

2018 – 2020

R.S.I.C Ramchandarpur

High School Education (82%)

Kushinagar, Uttar Pradesh

2018

EXPERIENCE

Data Analytics Trainee

Microsoft Elevate & AICTE

Remote

2023

- **Developed Business Intelligence Dashboards:** Designed an interactive Power BI dashboard to solve hyper-local demand forecasting challenges for quick-commerce "dark stores".
- **Integrated Machine Learning Outputs:** Transformed predictive outputs from an XGBoost regression model into clear, actionable visual insights using Power Query and DAX.
- **Automated Anomaly Detection:** Implemented native AI tools within Power BI to automatically detect traffic anomalies and explain sudden spikes in hourly delivery demand.
- **Data Processing:** Cleaned and engineered features from over 8 million historical order records to facilitate accurate 7-day forward-facing inventory predictions.

Full Stack Software Development Intern

Fizmaa

Remote

Present

- Engineered scalable backend services and cross-platform applications, integrating real-time data synchronization and live event analytics.

PROJECTS

Business Data Management Capstone (Sales & Inventory Analytics) | *Python, Excel, Pandas*

- Executed an independent, data-driven research project to optimize sales and inventory for a B2C retail business.
- Digitized and cleaned 12 weeks of manual sales data across 60+ products to uncover cyclical demand patterns and seasonal trends.
- Applied ABC segmentation to classify products by sales contribution, revealing that 54.9% of inventory items drove nearly 80% of total revenue.
- Utilized a Random Forest Regressor to forecast short-term demand, providing actionable recommendations to reallocate shelf space and prioritize high-performing stock.

Maritime Survivor Detection Classification | *Python, Scikit-learn, Pandas*

- Developed a robust classification model to predict passenger survival outcomes based on complex maritime incident data.
- Conducted rigorous Exploratory Data Analysis (EDA), handled missing values, and engineered predictive features to improve model accuracy.

House Price Prediction Regression | *Python, Scikit-learn, Pandas*

- Constructed a predictive regression model to estimate real estate values by analyzing historical house price datasets.
- Implemented data preprocessing pipelines and trained classic machine learning algorithms to minimize prediction error and identify key pricing drivers.

ACHIEVEMENTS

1st Place Winner | Syngenta Hackathon, Paradox'2026

Scholarship Recipient | Awarded financial merit scholarship for academic excellence

TECHNICAL SKILLS

Programming & Databases: Python, SQL (PostgreSQL, SQLite), DAX, C, Bash

Data Visualization & BI: Power BI, Excel, Matplotlib, Seaborn

Machine Learning & Data Analysis: Pandas, NumPy, scikit-learn, TensorFlow, Keras

Developer Tools: Git/GitHub, Google Colab, Linux Command Line, VS Code

Relevant Coursework: Deep Learning, MLOps, Managerial Economics, Industrial Applications
